YASARA is the molecular simulation program that finally makes it really easy to answer your questions. With an intuitive user interface, photorealistic graphics and support for affordable shutter glasses, autostereoscopic displays and input devices, YASARA creates a new level of interaction with the 'artificial reality', that allows you to focus on your goal and forget about the details of the program. YASARA is powered by PVL (Portable Vector Language), a new development framework that provides performance way above traditional software. PVL allows you to visualize even the largest proteins and enables true interactive real-time simulations with highly accurate force fields on standard PCs (see benchmarks). You can push and pull molecules around and work with dynamic models instead of static pictures.

Recent Developments Code Updates New Channels & Methods Automated Protein Structure Determination ProPara ProTool protein tool "ProPara ProTool is a complete protein structure determination software, including sequence alignment, loop modeling, structure refinement, energy minimization and chromatography peak picking. With ProPara ProTool you can not only determine the structure but also perform subsequent optimisations such as refinement, energy minimization and clustering with sufficient confidence." ProCon "ProCon is a program to identify proline and hydroxyproline residues in proteins. With ProCon you can align your protein sequences with other protein sequences and identify matching segments. The ProCon program also identifies possible N- and O-glycosylation sites. The program ProCon is a small program, taking up about 2 MB of memory and the executable is about 6 kB." ROSETTA An Efficient Molecular Modeling Platform "Rosetta is an efficient protein structure prediction engine. New developments and applications in Rosetta allow the rapid prediction of the 3D structure of large proteins, from high-resolution X-ray and NMR data. Rosetta has been shown to be able to predict structures of proteins with greater than 95% accuracy from NMR data." NativePro Best Protein Visualization Tool "NativePro is a program to visualize protein structures. NativePro makes it possible to represent three-dimensional protein structures in stereo and color. What's New in the YASARA?

YASARA is a molecular dynamics program for high-performance simulations. Its central task is to create an atomic model for the target system in 3D and to connect it with a force field, whose interactions define the behavior of the molecular system in time. The interaction force is calculated and updated according to Newton's second law. YASARA supports classical and quantum mechanics, bond and angle potentials, π - π interactions, implicit solvent, long-range electrostatic interactions, ultra-soft repulsion and torsion potentials, statistical torsion angle distributions, and so on. In general, YASARA can be described as a molecular dynamics program. In this context, it stands for an extremely flexible, very high performance software package that can cope with a huge variety of molecular problems. You will be able to simulate, for example, proteins, nucleic acids, lipids, and small organic molecules like caffeine, or even realistic solids. In addition to the development of an accurate and flexible force field, YASARA uses different visualization techniques to allow you to interactively evolve molecules and observe the results. With the YASARA's easy-to-use interface, you can make the most out of YASARA and let it take full advantage of your computer. Main features: YASARA makes it possible to carry out simulations at the atomic level of a wide range of biomolecules: proteins, nucleic acids, lipids. YASARA's efficiency and easy-to-use interface allow you to bring your model as close as possible to the real system, and then the forces and interactions that develop are valid. YASARA's interface shows the molecules in 3D graphics, so you can interact with them in a much more intuitive way. A large part of the YASARA commands work via the PVL, a new development framework. The PVL can be used in both the visualization and the command mode, thus making it possible to visualize and simulate even the biggest molecules in interactive real time without any technical restrictions. YASARA's command syntax is designed to be familiar, so that you won't need a lot of time to get used to the system. To ensure that your simulation will be stable and accurate, YASARA includes several built-in validations. It is also possible to conduct fully automatic, simulated annealing-type simulations, if desired. With YASARA, you can simulate the behavior
